

Muhammad Osama Malik

Full Stack Developer | IT Administrator

Wien, Austria | (+43) 68184281193 | osamamalik1111@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Vienna-based Full Stack Developer and M.Sc. Computer Science candidate at the University of Vienna, with 3+ years of commercial experience building cloud-native applications across Europe and internationally. Specialist in Angular, Node.js, and AWS/Azure. Proven track record in international organisations in Vienna, including the European Health Forum Gastein, with deep familiarity with GDPR, European data standards, and Austrian workplace culture. Currently architecting an accessibility platform for users with cognitive disabilities as part of a Master's thesis at INDEPENDO Wien.

TECHNICAL SKILLS

Programming	Python, JavaScript (ES6+), C++, HTML5, CSS3
Frontend & CMS	Angular, Angular Material, Bootstrap, TYPO3, WordPress
Backend	Node.js, Express.js, Capacitor.js, REST APIs
Cloud & DevOps	AWS (EC2, Lambda, DynamoDB), Microsoft Azure, GCP, Docker, Git/GitHub
Databases	PostgreSQL, MySQL, MongoDB, DynamoDB
IT Admin	M365 (Intune, Entra ID, SharePoint, Teams), ServiceNow, ITIL
Tools & OS	Jira, Figma, Insomnia, Linux, Windows, macOS

PROFESSIONAL EXPERIENCE

Full Stack Developer – Master's Thesis — INDEPENDO

Apr 2025 – Present

Wien, Austria

- Leading development of a cross-platform accessibility platform (Angular + Node.js + Capacitor.js) for users with cognitive disabilities, currently in active co-design phase with patients and caregivers.
- Conducting structured workshops with patients to translate real-world accessibility needs into technical requirements, directly shaping product architecture and UX decisions.
- Designed a GDPR-compliant PostgreSQL/MongoDB data layer handling sensitive personal health data, built to European health data standards from the ground up.
- Driving the full SDLC — from Figma prototyping and stakeholder workshops through to iterative development — ensuring the product reflects the lived experience of end users before launch.

IT Administrator — European Health Forum Gastein

Mar 2024 – Nov 2024

Wien, Austria

- Managed year-round hybrid cloud infrastructure across AWS and Microsoft Azure for an international health policy organisation, maintaining stable operations across day-to-day work and a large annual conference with 200+ attendees.
- Administered Microsoft 365 (Entra ID, Intune, SharePoint, Teams) for the organisation's staff, managing identity, device enrolment, and access controls throughout the year.
- Built automated onboarding and offboarding workflows to reduce manual IT effort and keep access permissions clean across the organisation.
- Handled security incidents and operational issues as they arose, keeping systems reliable in the lead-up to and during the flagship conference.

Feb 2023 – Feb 2024: Full-time M.Sc. studies at the University of Vienna + freelance web development projects.

Full Stack Developer — Protovoid Technologies

Islamabad, Pakistan

May 2022 – Feb 2023

- Built and maintained frontend interfaces for e-commerce clients using Angular and Bootstrap, working both directly with clients on requirements and alongside a project manager depending on the engagement.
- Developed backend services in Node.js with SQL and NoSQL databases to support product catalogues, user accounts, and order flows for retail web applications.
- Customised WordPress storefronts and integrated third-party plugins to match client branding and functionality requirements, handling end-to-end delivery on smaller projects independently.

Full Stack Developer — Slosh AI

Islamabad, Pakistan

Oct 2021 – Apr 2022

- Built the full-stack dashboard for a medical AI product that detects COVID-19 and pneumonia from chest X-rays in DICOM format, handling both the frontend interface and the backend that served the ML model's results to clinicians.
- Integrated a trained ML model (developed by the in-house ML team) into the clinical dashboard, connecting model inference outputs to a readable, actionable UI for medical users.
- Worked on a second product focused on early-stage cancer detection, building the dashboard layer that displayed results from medical imaging data.
- Collaborated closely with the ML team throughout — translating model outputs into frontend logic and ensuring the backend API handled DICOM file ingestion correctly.

EDUCATION

M.Sc. Computer Science — University of Vienna

Wien, Austria

Expected 2026

Focus: Full-Stack Development, System Architecture — Thesis: Cognitive-Accessible Ecosystems

B.Sc. Computer Science — COMSATS University Islamabad

Islamabad, Pakistan

2020

Capstone: Autonomous Robot with Voice & Image Recognition

LANGUAGES

English C1/C2 — fluent (professional working proficiency)

German A2 — actively learning

TECHNICAL PROJECTS

COVID-19 & Pneumonia Detection Dashboard — Slosh AI

- Designed and built the full-stack clinical dashboard for a medical AI product that analyses chest X-rays in DICOM format to detect COVID-19 and pneumonia, integrating the ML team's trained model into a usable interface for clinicians.
- Handled DICOM file ingestion on the backend, model inference integration, and the frontend display of diagnostic results — working end-to-end across the product.

Early-Stage Cancer Detection Dashboard — Slosh AI

- Built the dashboard layer for a second medical AI product focused on identifying early-stage cancer from medical imaging data, translating complex model outputs into a clear, clinician-facing interface.

Autonomous Robot System — B.Sc. Capstone

- Engineered an autonomous navigation system with voice command integration and sensor-based image recognition for obstacle avoidance and target detection, built as a final-year capstone at COMSATS University.
